

Abiozen

Supplier overview

Abiozen is a United States buyer of active pharmaceutical ingredients and intermediates. We source from qualified manufacturers and supply US generic manufacturers, compounding pharmacies, contract manufacturers and research laboratories through our own marketplace.

This document explains what we buy, who we sell to, how a supplier's products are listed, and what we need from you to begin. It is written to be short enough to read before a call.

What we buy

Our sourcing list is not a general catalogue request. It is built from clinical demand: molecules with active recruiting trials in the United States, cross-referenced against which companies hold an active US Type II drug master file. Every molecule we ask about has identifiable downstream demand behind it.

That matters to a supplier in one specific way. When we send you a list, it is a list of things we expect to buy, not a survey. And where a molecule has only one or two DMF holders worldwide, we know that before the conversation starts.

- Active pharmaceutical ingredients, commercial scale
- Intermediates and key starting materials
- Second-source qualification for molecules where our buyers already have a supplier
- Contract manufacturing, where a buyer needs a finished form rather than material

Who we sell to

Buyer segment	What they need
Generic manufacturers	Commercial-scale API, qualified second sources, consistent lead times
Compounding pharmacies	Smaller quantities, documented quality, reliable repeat supply
Contract manufacturers	CMO and CDMO programmes, often at short notice
Research laboratories and biotech	Small quantities, reference standards, early-phase material

Universities and research institutions	Research quantities with documentation
--	--

The mix matters because it changes order shape. A compounding pharmacy and a generic manufacturer are not the same customer, and a supplier who can serve both has more of our demand available to them.

How a supplier works with us

1. Share your DMF list

The fastest start. Send your current list of drug master files and we will identify the overlap with our demand ourselves and come back with specific enquiries rather than general ones.

2. Your products are listed

Products are listed on the Abiozen marketplace with their specification, so US buyers searching for a molecule find yours. Search is served by a dedicated search service with typo tolerance and faceted filtering, which in practice means a buyer who misspells a molecule still finds it.

3. Enquiries reach you as enquiries

A buyer's enquiry comes to you with the quantity, the intended use and the buyer segment already attached. You price it. We do not set your prices and we do not publish them without your agreement.

4. Order and supply

Purchase order, documentation, shipment. We handle the US buyer relationship, the commercial terms and the payment; you supply the material.

What we need from you to begin

Item	Why
Current DMF list	To identify the overlap with our demand without guesswork
Product list with specifications	To list accurately; a wrong specification is worse than no listing
Regulatory status per product	US DMF, CEP, GMP certification as applicable
Typical lead time and capacity position	So we quote a date to a buyer we can actually hold
Named commercial contact	One person, not a shared inbox, so enquiries are not lost
Quality documentation on request	CoA format, audit history, inspection status

What we are careful about

Two things we would rather state now than discover later.

- **Entity accuracy.** Several firms trade under a name that differs from the legal entity holding the drug master file. We confirm the legal entity before any purchase order, and we would rather ask an obvious question early than contract with the wrong company.
- **We do not represent your products beyond what you tell us.** Specifications, regulatory status and lead times come from you and are listed as you give them. We do not improve them.

Who we are

Abiozen LLC is a pharmaceutical contract research organisation and marketplace based in Chicago, Illinois, with an engineering and operations centre in India. Our technology arm, Adifice Technologies, builds and runs the platform the marketplace sits on — it is our own system rather than a licensed one, which is why a supplier integration is a conversation with the people who can actually change it.
