How Abiozen, AROS and the agent layer work together

The model we discussed at your stand

CPHI WORLDWIDE · MILAN · OCTOBER 2026

Abiozen LLC
Buffalo Grove & Chicago, Illinois
United States

> **In one sentence:** Abiozen supplies the molecule together with its regulatory compliance documentation, and arranges analytical testing validated in the client's own region — for companies running studies from discovery through formulation.

THE PARTS, AND WHAT EACH ONE IS FOR

WHERE DEMAND STARTS

A study with a need

A sponsor, CRO or research group needs material for a programme: a defined molecule, a grade, a quantity, a date, and documentation their reviewers will accept.

→

THE MOLECULE

Abiozen marketplace — Live

A pharmaceutical API and molecule marketplace. Suppliers list what they make; we match it to real, specified demand and move the material.

THE DOCUMENTATION

AROS — Early release

Autonomous Regulatory Operating System — *aroscompliance.com*. Compliance and regulatory tracking, where one organisation can act as buyer, supplier or both, and material is tracked in and out.

THE TESTING

Analytical partners — Being onboarded

Independent laboratories performing release and characterisation testing, validated in the region where the client's own reviewers sit.

→

WHAT TIES IT TOGETHER

The agent layer

Our coordination layer reads demand as it appears, matches it against what our suppliers hold, and routes the sourcing, the documentation and the testing as one piece of work rather than three.

It is why a request becomes a specified enquiry rather than a general one — and why the enquiry reaches you with the grade, quantity and timing already attached.

WHAT THIS MEANS IF YOU SUPPLY MATERIAL

- **Qualified enquiries, not catalogue requests.** Demand arrives already specified, so the first exchange is about grade, quantity and lead time rather than discovery.
- **The documentation burden is shared.** Compliance paperwork travels with the molecule instead of landing on you after the order.
- **Testing is arranged, not left open.** Analysis is validated where the client's reviewers are, which is usually what delays qualification.
- **One commercial relationship** covering material, documentation and testing, rather than three to coordinate.

WHAT THIS MEANS IF YOU BUY MATERIAL

- **Several hundred products** across our supplier network, with sourcing as the thing we are fastest at.
- **Short a molecule?** A supplier slipping, a qualification falling through, a volume you cannot cover — send it to us and we will say honestly whether we can help, and how quickly.
- **Material and paperwork together**, so a programme is not held up waiting for documentation that should have arrived with the shipment.

WHAT WOULD HELP US MOVE QUICKLY

1. **Your full product list** — the complete catalogue, not only what we discussed. We add demand continuously and would rather match against everything you make.
2. **Where a DMF is on file**, and the grades you can supply today versus on request.
3. **Indicative lead times** and minimum quantities, so we can answer a buyer without coming back to you first.

Status is stated plainly above: the marketplace is operating, AROS is in early release, and the analytical partner network is being onboarded now. Nothing in this document is an offer or a commitment to supply; grades, quantities, documentation and pricing are confirmed per enquiry.
